

SOP Dashboard

Developer Note — Full Build Specification

Prepared for: Development team **Prepared by:** TT **Date:** July 22, 2026
Related: Crew+ app (points & perks)

1. Purpose

Van-Isle Waterproofing+ is building a manual of Standard Operating Procedures that documents *every* repeatable action in the business — from completing a service, to preparing a site, to demobilization. Today those procedures live in a paper/PDF checklist template (attached, "Crew Checklist Template 2026"). We want to turn that static template into a living tool.

The SOP Dashboard lets an owner or manager map out the systems and processes that need documenting, hand each one to the right crew member to build out, and collect the resulting steps — with photos and video — into clean, repeatable checklists anyone on the team can follow. When a crew member completes an SOP they've been assigned, they earn **+20 points** into the Crew+ app that count toward perks.

The goal is the same one stated on the checklist template: *document every action in our day so we can perform our services at the highest quality and use our time wisely.*

Keep the design scope consistent with our previous app requests — same visual language, same Van-Isle Waterproofing+ branding (logo, teal/black palette), same navigation patterns and component styling. This note describes behavior and structure; match the look and feel of the existing suite.

2. Core outcomes the app must deliver

The dashboard must do four things:

1. **Map the work.** Give the owner/manager a way to lay out the systems and procedures that still need to be documented, organized as easy-to-scan checklists by category.
 2. **Assign the build.** Assign the *creation* of an SOP to a specific crew member, with guided prompts that walk them through adding simple, clear steps to complete that system or process.
 3. **Document visually.** Let the crew member attach photos or videos to any step so the procedure is shown, not just written.
 4. **Reward completion.** Award the crew member **+20 points** into Crew+ when their assigned SOP is completed and approved.
-

3. Users & roles

Role	Who	Can do
Owner / Manager	Business owner, ops manager	Create SOP categories and items to be documented; assign SOP creation to crew; review, request changes, and approve submitted SOPs; view the full library; see completion/points reporting.
Crew Lead	Lead on a crew	Everything a Crew Member can do, plus can be assigned higher-level SOPs and (optionally) assign/reassign within their crew. Configurable.
Crew Member	Field crew	See SOPs assigned to them; build out steps using the guided form; attach photos/videos; submit for review; follow published SOPs; view their own points earned.

Roles and permissions should be configurable rather than hard-coded, consistent with how roles work in our existing apps.

4. The SOP library — structure

The library mirrors the categories already defined in the attached template. These become the **default SOP categories** the manager maps against. Each category holds individual SOP items (procedures), and each item moves through a status lifecycle (Section 6).

Default categories and items (seeded from the attached checklist):

- **Warehouse Operations** — Opening Procedures; Safety Checks; Inventory Handling; Standards; Anytime Tasks (Daily / Weekly / Monthly); Tool Inspection; Equipment Inspection; Vehicle Inspection; Fleet Inspection; Materials Inspection; Repairs & Maintenance.
- **Daily Start-Up** — Tool selection; Material selection; Vehicle Inspection; Truck loading procedure.
- **End-of-Day Closeout** — Equipment Cleaning; Equipment Checks; Material returns; Inventory checks; Vehicle Fuel (min. tank required to leave for a job; where to get gas & payment); Mileage Checks; Tool maintenance.
- **Truck Loadout (start of day) by Service** — Truck Prep; then by service: Waterproofing, Traffic Coating, Caulking, CFI, XPS.
- **Truck Closeout (end of day)** — Truck Close-Out; then by service: Waterproofing, Traffic Coating, Caulking, CFI, XPS.
- **Service Execution** — Waterproofing; Traffic Coating; Caulking; CFI; XPS (+ room for additional services).
- **Site Prep** — Hazard Assessments; Equipment Staging; Materials Staging; Crew Planning; Down-time activities; What-if scenarios (broken, battery, lost, forgot).
- **Daily Job Site Closeout** — What to do before leaving the site; things to bring back (ladders, batteries, tools).

- **Crew Lead** — Scheduling (daily/weekly/monthly lookahead); Site Readiness; Site manager touchpoints; Materials Ordering; Inventory Tracking; Warehouse management; Downtime Reduction Procedures; Add-on opportunities (crack injection).
- **Travel & Mobilization** — Site Readiness; Site Access Procedure; GC/Site Super Comms; Parking Logistics; Site Orientation; Site Safety; What tools/materials are on site; Out-of-town (mileage own car, LOA).
- **Quality Assurance** — Start of the job; Middle of the job (50% complete); End of job (95% complete).
- **Demobilization (100% complete)** — Site Checks & sign-off; What needs to come back to the warehouse (fence signage, ladders, tools, batteries).
- **Warranty**
- **Other** — free slots for categories the team adds over time.

The manager can add, rename, reorder, and archive categories and items, so the seed list is a starting point, not a fixed schema.

5. Key screens & flows

5.1 Dashboard (home)

Landing view for owner/manager. Shows the SOP library at a glance: categories with progress indicators (e.g., "Service Execution — 3 of 6 documented"), a list of SOPs awaiting review, SOPs in progress, and unassigned items that still need someone on them. Quick actions: **+ New SOP, Assign, Review queue.**

For a crew member, the home view is **My SOPs**: what's assigned to them to build, what's in review, what's been approved, and their points earned.

5.2 Map / create an SOP (manager)

Manager picks a category (or creates one), adds an SOP item with: - **Title** — what the checklist is for (maps to the template's "What this checklist is for" field). - **Category**. - **Short description / why it matters** (optional). - **Assign to** — the crew member responsible (maps to "Who is responsible for this task"). - **Requires photo / video?** — default Y/N flags the manager can set to signal expectations (crew can still add media freely). - **Due date** (optional).

Saving creates the SOP in **Assigned** status and notifies the crew member.

5.3 Build the SOP — guided step form (crew member)

This is the heart of the app and should feel as simple as the paper Process Form (attached, page 4), but smarter. The assigned crew member opens the SOP and is walked through building it:

Header fields (pre-filled where known): Date, Created by, What this checklist is for, Who is responsible.

Thinking prompts. Before/while adding steps, surface the guiding prompts from the template so the crew member documents the *whole* process, not just the happy path. Show the prompt set relevant to the SOP's category. Prompts to include (from the attached document):

- *Site Prep / Crew Lead*: Has the site manager been called and confirmed scaffolding/access, crew readiness, and that our truck/boom lift fits? Do we need to review plans (what are they called) before we go? Do we have enough product — double-checked? What happens if we run out of something? What happens if the site isn't ready? Has our signage been put up on the fence?
- *Service Execution*: What's the go/no-go weather policy for this service (e.g., 30% chance of rain — do we still send the crew)? What quality checks are required before, during, and after? What mistakes commonly happen, and how does this checklist help avoid them? What happens if an item is forgotten? How do you know we're ready to spray?
- *Warehouse / Truck*: What recent hiccups happened on a job site or at the warehouse, and how were they resolved? Why are you loading that tool? Is there at least a half tank of gas — if not, where do you get gas and how is it paid? What happens if you get a parking ticket? What happens in an accident? What are the 10 things to check if the XYZ tool breaks?
- *Site wrap-up*: Has our signage been taken off the fence? What job site do we bring it to next?

These prompts should be attached to categories in a small, editable config so the manager can tune which prompts appear where and add their own over time.

Steps. An ordered, add-as-many-as-you-need list (the paper form caps at 8; the app should not). For each step: - Step text (the action). - Optional photo(s) — capture from camera or upload. - Optional video(s) — capture or upload. - Optional short note/caption.

Steps can be reordered (drag), edited, and deleted. Auto-save throughout.

Media handling. Photos and videos are the differentiator vs. the paper form. Support in-app camera capture and gallery upload, thumbnails inline with each step, tap to expand, and sensible compression/size limits for field upload over cellular. Store media against the step, not just the SOP, so a published checklist shows the picture right next to the words. Handle offline capture with sync-on-reconnect if that fits our existing app patterns (crews are often on sites with poor signal).

Submit. When the crew member is done, they submit for review → status moves to **In Review** and the manager is notified.

5.4 Review & approve (manager)

Manager opens a submitted SOP, reads the steps, views media, and either: - **Approve** → status **Published**; the SOP joins the live library; the **+20 points** event fires for the assigned crew member (Section 7). -

Request changes → status back to **In Progress** with comments; crew member revises and resubmits. Points are awarded only on approval, and only once per SOP.

5.5 Follow a published SOP

Any team member can open a published SOP as a clean, do-this-now checklist: numbered steps, photos/video inline, tickable as they go. This is the payoff — the documented process is now usable in the field. (Whether "runs/executions" of a checklist are logged is a possible v2; see Section 10.)

6. SOP status lifecycle

```
Draft/Assigned → In Progress → In Review → (Approve) → Published
                                     |
                                     ↳ (Request changes) → In Progress → ...
Published → Archived (optional)
```

- **Assigned** — created by manager, waiting on crew member.
- **In Progress** — crew member is building it (auto-set on first edit).
- **In Review** — submitted, awaiting manager.
- **Published** — approved and live in the library. **Triggers +20 points once.**
- **Archived** — retired/superseded, kept for history.

7. Crew+ points integration (+20 on completion)

When an SOP is **approved/published**, award **+20 points** to the crew member who created it, credited to their Crew+ account toward perks.

Assumption for the dev: Crew+ is a separate app that owns the points ledger and perks. The SOP Dashboard should *fire an award event*, not maintain its own competing balance. Please confirm the Crew+ integration contract; expected shape:

- **Event:** `sop.completed`
- **Payload:** `{ crewMemberId, sopId, points: 20, awardedAt, awardedBy (managerId), reason: "SOP created & approved" }`
- **Delivery:** API call or webhook into Crew+ (confirm endpoint, auth, and idempotency key so a re-approval or retry can't double-award).
- **Idempotency:** award exactly once per SOP. If an SOP is unpublished and re-approved, do **not** re-award (unless product decides otherwise).

The dashboard should display the points a crew member has earned *through SOP creation* (read from Crew+ if it exposes a balance/history endpoint, otherwise show a local tally of SOP awards). Perk redemption stays in Crew+ and is out of scope here.

Flag for confirmation: exact point value if it ever varies by SOP complexity (default flat +20), and whether Crew Leads earn points for SOPs they're assigned.

8. Notifications

- Crew member notified when an SOP is assigned to them.
- Manager notified when an SOP is submitted for review.

- Crew member notified on approval (with the +20 confirmation) or on requested changes (with comments).
- Optional nudge on overdue assigned SOPs.

Use whatever notification channel the existing apps use (push/in-app); keep it consistent.

9. Data model (starting point)

- **SOP** — id, title, categoryId, description, status, assignedToUserId, createdByUserId, requiresPhoto (bool), requiresVideo (bool), dueDate, createdAt, submittedAt, approvedAt, approvedByUserId, pointsAwarded (bool).
- **Category** — id, name, sortOrder, archived, promptSetId (links to the thinking-prompts config).
- **Step** — id, sopId, sortOrder, text, note, createdAt.
- **Media** — id, stepId, type (photo/video), url/storageKey, thumbnailUrl, size, capturedAt.
- **PromptSet** — id, name, prompts[] (editable list surfaced during step building).
- **User** — id, name, role, crewId, crewPlusId (link to Crew+ account).
- **PointsAward** (local record of what we fired) — id, sopId, crewMemberId, points, awardedAt, externalRef (Crew+ transaction id), status.

10. Out of scope / v2 candidates

- Logging individual *runs* of a published checklist (who ran it, when, tick-off history) — likely a strong v2.
- Analytics on time saved / downtime reduction.
- Version history/diffing of an SOP after edits.
- Digital signatures on sign-off SOPs (Demobilization, QA).
- Bulk import of existing SOPs from the current PDFs.

Note these so the schema doesn't paint us into a corner (e.g., keep SOPs versionable).

11. Acceptance criteria (v1)

1. A manager can create a category and add an SOP item, and assign it to a crew member.
2. The assigned crew member receives a notification and can open a guided form pre-filled with the SOP's header fields.
3. The build form surfaces the category-appropriate thinking prompts, and those prompts are editable in a config.
4. The crew member can add, reorder, edit, and delete an unlimited number of steps, each with optional photos and/or videos captured in-app or uploaded.
5. Work auto-saves and survives the app closing; media captured offline syncs on reconnect.

6. The crew member can submit for review; the manager can approve or request changes with comments.
 7. On approval, a `sop.completed` event awards exactly +20 points to the crew member in Crew+, once and only once.
 8. A published SOP is viewable by any team member as a clean, numbered checklist with media shown inline.
 9. All screens match the existing Van-Isle Waterproofing+ app branding and design system.
-

12. Open questions for TT / product

1. Confirm the Crew+ integration contract (endpoint, auth, idempotency) and whether point value is always +20.
2. Should Crew Leads and managers also earn points for SOPs they create?
3. Do we need offline capture in v1, or is reliable-signal-only acceptable to ship faster?
4. Should published SOPs be tick-off/runnable in v1, or is that v2?
5. Any approval step beyond a single manager (e.g., two-person sign-off for safety-critical SOPs)?
