

LOGO STANDARDS GUIDE

Manage brand consistency across all communications and client touchpoints.

Primary Logo

We designed this logo to capture and communicate your company's unique brand identity. The logo should always be applied consistently using the recommendations outlined in this guide.

Logo with Tagline

We've created a tagline variation for when the Van-Isle brand needs additional context.

Weather anything.

Emblem

We've also provided a logo mark to function as a secondary brand element and to support small-scale icon applications.

Logo Fonts

Use the brand fonts outlined here to maintain a consistent look and feel for all Van-Isle marketing material.

Your Digital Colour Palette

The following colour palette creates a uniform brand look and clear identity.

For digital applications, such as websites, social media, and screen-based presentations, colours should be defined using RGB (Red, Green, Blue) and HEX (hexadecimal) values. These formats ensure colour consistency across all digital platforms.

Always use the specified RGB and HEX values provided in this guide to maintain brand integrity and visual consistency across digital media.

RECOMMENDED FILE FORMATS FOR DIGITAL USE:

SVG, PNG, and JPG

Marine Teal

RGB

HEX

R 20 G 162 B 164

#14A2A4

Carbon Black

RGB

HEX

R 28 G 30 B 32

#1C1E20

Solid White

RGB

HEX

R 255 G 255 B 255

#FFFFFF

Your Print Colour Palette

For all print materials, colour consistency is essential to maintaining brand integrity. Use CMYK or Pantone values to ensure accurate reproduction across various printers and substrates.

Users of these guidelines should be aware that colours can be dramatically different when applied to different media. Care must be taken when quality-controlling print and colour outputting.

We recommend printing in Pantone on coated media to ensure richness in colour and consistency across printed materials.

RECOMMENDED FILE FORMAT FOR PRINT EXPORTS:

EPS, PDF

Marine Teal

CMYK
PANTONE

C 88 M 0 Y 41 K 62
6138 C

Carbon Black

CMYK
PANTONE

C 56 M 50 Y 47 K 82
426 C

Solid White

CMYK
PANTONE

C 0 M 0 Y 0 K 0
000 C

Printing Guidelines

Use CMYK for Printing

All print files should use CMYK (Cyan, Magenta, Yellow, Black) values—not RGB. RGB is for screens and may not print accurately.

Use Vector Files Whenever Possible

Vector files (.EPS for print, .SVG for digital) are resolution-independent, scaling without quality loss. This ensures logos remain clear and proportionate, preserving brand integrity across all media, from business cards to large signage.

Use Pantone for Colour Matching

If exact colour matching is essential (e.g., for logos or key brand elements), use the listed Pantone colours. Pantone provides more consistency between different printers and materials.

Avoid Relying on HEX or RGB

HEX and RGB values are for digital use only. Do not use them in print files, as they can lead to colour mismatches.

Test with Print Proofs

Always request a printed proof before final production. This helps verify colours and allow for adjustments if necessary.

Consider Paper Type

Colours may appear differently depending on paper (e.g., glossy vs. uncoated). We recommend testing on the same paper type as your final product.

Safe Area

The logo requires a defined safe area to ensure clarity and visual impact. This protected space prevents other elements from crowding the logo and helps maintain its intended communication and brand presence.

Use the height of 2 stacked circles/periods from the logo to determine the minimum amount of safe space that must surround the mark on all sides.

LOGO STANDARDS GUIDE
