

Waterproofing+ Warehouse Wizard

A simple, internal, login-based **mobile-responsive web dashboard** that keeps our warehouse organized: what inventory and tools we have, what the crew uses on each job, and getting the trucks loaded, fueled, checked and clean — gamified with points. First of three connected tools (Warehouse Wizard · Crew+ · SOP+) that share one login and one points system.

What it IS vs. what it is NOT

✓ IT IS

A **warehouse readiness tool** — the source of truth for **what we own, what we use, and what condition it's in**, across Inventory, Tools, and Trucks.

✗ IT IS NOT

A project-management or work-order tool.

BuilderTrend already handles the crew's daily work logs — do not rebuild that. There is no "daily work log" here.

Mental model: the warehouse's inventory-and-equipment brain, not a jobsite tracker. It answers "what's in our warehouse and what did we use," not "what work did we do."

Core functions of the dashboard

1. **Inventory List & Logs** — the master item list, and the daily log where the crew records the exact products and quantities they used.
2. **Tools List & Tools Tracking** — the list (what each tool is, service used for, warehouse location + condition) and tracking of which site each tool is at.
3. **Truck Load-In / Load-Out** — morning load & check, evening unload & tidy.
4. **Truck Gas & Maintenance Logs** — fuel-ups and maintenance/servicing history per vehicle.
5. **Service Load-In / Load-Out** — per-service load lists so the crew loads the right materials and tools for the service being performed.
6. **Warehouse Tasks (Daily, Weekly, Monthly)** — recurring warehouse checklists on their own reset cycles.

Module details

1 · Inventory — List & Logs (the heart of the tool)

Track the full catalog (45+ SKUs: Waterproofing, Drainage & Protection, Caulking & Sealants, Insulation, Crack Injection, Traffic Coatings, Termination & Fasteners, Consumables) with real names (Tremproof 260, Tremdrain 6000/6000x, Vulkem/Dymonic caulking, Xypex/Kryton, CFI, etc.). **The core rule: each material has one LOCKED unit of measure** (barrels, rolls, tubes, pails, sausages, panels...) — some allow half-quantities, others whole numbers only. In the Log, the crew records exact inventory used/delivered/returned/lost by **choosing from the locked master list (never free text)**, tagging a **Customer + Job + Address** and a **Service**; stock decrements live. Each material carries the **price from our most recent order** and **redlines any item whose price increased**; reordering is pallet-aware (price,

units/pallet, GST, freight). **All pricing and the monthly CFO cost report (PDF & CSV) are admin-only and hidden from the crew.**

2 · Tools — List & Tracking

The crew can **add every tool**, each with a **photo**, **warehouse location**, the **service** it's for, and **condition** (good / damaged / needs repair). **Tools Tracking** shows which site each tool is at; tools are checked out (to a job + crew member) and back in. Cordless tools track a **"last charged" date** with a warning when overdue, so dead batteries never leave for a site. Admin sees how many of each we have, which work, which are out and where, and what needs **servicing/replacing before it breaks**.

3 · Trucks — Load-In/Out + Gas & Maintenance

We run **6 vehicles**; any driver may use any truck. A **morning Load-In** checklist (load per job, oil & gas, odometer/KM, walk-around) and an **evening Load-Out** (unload & tidy). **Gas & Maintenance Logs** record each fuel-up (vehicle, date, amount, cost) and servicing events, feeding a per-truck history and last-serviced tracking (replacing paper records). Admin sees servicing needs early and confirms trucks are ready.

4 · Service Load-In / Load-Out

For each service (Waterproofing, Insulation, Crack Injection, Traffic Coatings), a defined load list of the materials and tools that service needs — so the crew loads correctly for the work and unloads/returns properly afterward.

5 · Warehouse Tasks (Daily / Weekly / Monthly)

Recurring warehouse checklists that reset on their own cycles, tagged by service where relevant. Completing tasks earns points (below).

Jobs & customers (synced from QuickBooks)

Jobs are added almost daily, so they are not entered by hand. The dashboard **syncs with QuickBooks Online to pull Customer Name, Job (Project), and Address** and keeps the list current. **BuilderTrend has no usable API, and that's fine** — QuickBooks provides the three fields we need. The dashboard uses those identifiers only to attach supplies/tool usage to the right job; **it must not pull or expose any financial data**. Manual add/edit is a fallback.

Users, roles & points

Roles: **Admin/Manager** (sees everything, owns master lists, sets point values, CFO export); **Crew Lead** (manages their crew's members, confirms/signs off tasks, can mark a task "not relevant" for a member on a date, can log new tasks/faults and add/deduct points); **Crew member** (own login; logs; earns points). ~10 people; support multiple crews and crew leads.

Points (gamification) — every member **starts at ZERO**; points are per individual, tied to their login.

- **+5 points** per completed item (standard).
- **Up to +20 points** on specific higher-value items (values defined in the **Points tab of the spreadsheet**).
- **-10 points** deducted when things are done incorrectly.

The crew are 20–30 and motivated by this — keep it simple.

Project phases, product family & budget

Three connected tools — shared login & shared points

This is the **first of three connected dashboards, and a crew member's points must sync across all three**. Build a **shared user identity and a central points ledger** (one login + one points balance per person) that all three read from and write to — not three separate systems. All three must be **mobile-responsive** and **easy to edit directly in the tool (not via a spreadsheet)**.

PHASE	TOOL	WHAT IT DOES	BUDGET (CAD)
1	Waterproofing+ Warehouse Wizard (this spec)	Inventory, tools, trucks, warehouse tasks	\$500 one-time
2	Crew+ (People / HR)	Crew can also earn points here; points from Waterproofing+ also appear in Crew+	\$300 one-time
3	SOP+	Crew build SOPs from a checklist the owner provides, filling in exact steps per item, earning points for completing them properly within a time frame; points sync across all three	\$300 one-time
Final	Intelligent tools (analytics)	See below	to be scoped
Ongoing	Hosting / running all three	Keep total running cost affordable	~\$100 / month, all-in

Final phase — intelligent tools

- **Vendor price-change detection** — track material prices from vendors over time to catch where they're **overcharging us without notice**.
- **Over-order / return detection** — determine when an inventory item **isn't being used or was over-ordered**, so we can return the surplus.
- **Loss detection** — surface when we appear to be **losing products or tools**.

Also noted for later: daily jobs-based crew tasks that prep the crew for a specific service on a specific job.

Scope guardrails (what's included at these prices)

The budgets above are **fixed-price for the deliverables listed here**. Anything outside this list is quoted separately and agreed in writing before work starts.

- **Phase 1 — Warehouse Wizard (\$500 one-time)** includes: the six core functions; locked item names/units; Customer + Job + Address + Service on every log; role-based access (crew vs. admin, crew see no financials); the QuickBooks jobs sync; points (+5 / +20 / -10) with a leaderboard tied to logins; a one-time Excel import to seed data with in-tool editing afterward; the monthly CFO cost export (PDF/CSV); and hosting on our subdomain, mobile-responsive, matching the prototype's design.
- **Phase 2 — Crew+ (\$300)**: the People/HR dashboard, reading/writing the shared points ledger so Waterproofing+ points appear here.
- **Phase 3 — SOP+ (\$300)**: SOP creation from our checklist, points for on-time completion, synced to the shared ledger.
- **Ongoing (~\$100/month)**: hosting and running all three, plus minor content/config support. New features, integrations, or design overhauls are quoted separately.
- **"Done" for each phase**: deployed, works on phones, matches the prototype's look, and the listed features are demonstrated with our real seeded data.
- **Not included unless separately agreed**: the final "intelligent tools" analytics phase; native iOS/Android app-store apps; offline mode; AI parsing of past handwritten logs.

Content management (maintained in the tool — no code, no spreadsheet upkeep)

Master data is **imported once from an Excel/Google spreadsheet** to seed the database (Inventory, Inventory Log, Tools, Trucks, Tasks, Points tabs; Inventory columns B, C, D, G are the locked choices used across all logs). **After that initial import, all ongoing editing happens directly in the dashboard — the owner should not have to maintain a spreadsheet, and never touches code.** The deliverable is a **one-time Excel import**, not an ongoing spreadsheet sync.

Cross-cutting & technical direction

Mobile-responsive, login-based (phones, tablets, laptops), matching the existing prototype's clean design. Take the prototype and make it real by backing it with a **hosted shared database**, deployed as an **installable mobile-responsive web dashboard**. All tables pre-seeded from our spreadsheet (one-time), with an **atomic stock-update function** so simultaneous logging doesn't overwrite counts. The developer may choose the platform, provided it supports shared live data, per-crew logins with **role-based access (crew vs. office/admin — crew see no financials)**, the **QuickBooks jobs sync**, **price history with redline-on-increase**, the reporting/export above, **in-tool editing of all content**, and a **shared points/identity foundation for Crew+ and SOP+**. Deliverables: the connected multi-user dashboard matching the prototype's design, hosting, role-based logins, the QuickBooks integration, pricing-and-redline logic, the monthly CFO export, in-tool content editing, and the one-time Excel

import. Simple checklists, the points program, and an affordable platform cost ($\leq$ ~\$100/month to run all three) are important. Crew hours 6:30 am–3:30 pm, Mon–Sat, with a "pending report" nudge at end of day.

Existing assets to hand over: (1) the working interactive prototype showing the intended design and all modules; (2) our master **Excel/Google spreadsheet** with real catalog/tools/trucks/tasks/crew/points data to seed the database; (3) a Supabase schema + seed SQL from an earlier pass (optional reference).

Waterproofing+ Warehouse Wizard · Van Isle Waterproofing · Internal inventory, tools & truck-readiness dashboard — first of three connected tools (Warehouse Wizard · Crew+ · SOP+).
