

TESTING: We will test the live site and provide input and feedback this week.

CREW USE: We want the tool to be live and ready for the team to log in and use by September 14. This is the day the crew will input their data and test all tools.

These will be input directly into the tool the week of Sept 14:

- Mileage and last-service fields for trucks
- Tools
- Crew personal data & certifications
- Inventory logs for August & September

A. Inventory & warehouse data (Warehouse Wizard)

Developer Feedback

All data will be accurate and ready to upload by Sept 12

Tracking Frequency: We count on the last day of the month in the unit in which the item is billed, and record usage against the project

Developer Requests

INVENTORY AKA Inventory at warehouse: [This sheet](#) shows the current quantities of what's in the warehouse. This information will also live in the new tool as it is our master for pricing and quantities. This log ensures that the crew does not order something we already have in the warehouse.

This is our master list, and the crew should be able to select any of these items on their daily inventory log. Outside of Tremco items, these are lower-value items that are used frequently, but are tracked less rigidly than Tremco.

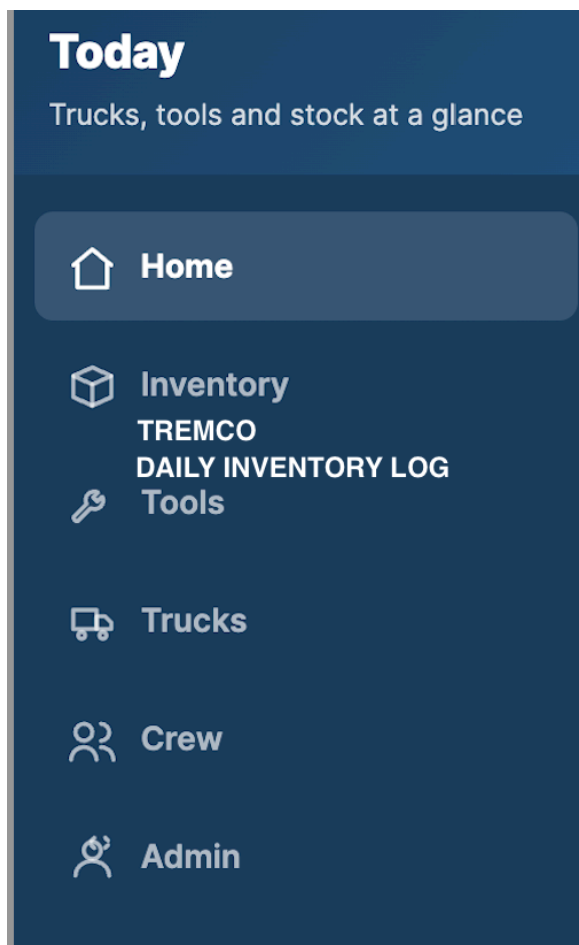

TREMCO

Tremco: As this is our highest value inventory item that can be easily linked to jobs, we will have a new section for it on our tool. We track quantities in the warehouse on the first of each month.

These are our highest-value items and the ones that we can directly bill back to projects. The inputs here go into the balance sheet and are essential for financial tracking, specifically for Tremco items. The crew still needs to be able to select these items for their DAILY LOGS, but it would be good to live on a separate section than the general inventory at the warehouse.

<https://docs.google.com/spreadsheets/d/1obxwdf-RfFFPK6rXHLilyerjSR4rnCM7/edit?usp=sharing&ouid=102071725214584200511&rtpof=true&sd=true> → Use Tremco ON-HAND quantities from the "Inventory at Warehouse" tab, not the sheet. Incorporate these sections and coding into the app in a NEW section called Tremco.

Add a Tremco section under Inventory on the tool:

Daily Inventory Log: Things used and logged at the end of each day. Set UNITS (column f) are locked. All inventory from July onwards is [here](#). This log tracks usage of all items connected to a job, even small things like rags or brushes.

Should we split this into a new section so it is crystal clear where the crew needs to log their info? Reminder that we need to select the date with every entry.

As of September 12, please add all inventory logs from this sheet to the tool so the crew can see past info. This is where it's essential to have the DATE & PROJECT NAME. Give each team member 5 points per item they added → Column I is where the crew name is listed.

Note: Since Josh and Logan are no longer at the organization, put any points they've earned into a CREW pool of points that we will use to go towards a company breakfast.
